

TIG[®] authenticig

WEB TERMINAL

The Web Terminal, as part of the TIG authenticig MES package, is the central working device for the shop floor staff. It permits time-saving acquisition of important data and makes relevant information available in digital form.

For comprehensive digitization of production, in addition to the automatically recorded machine data, supplementary information is required that must be added manually. The Web Terminal enables the operators to easily enter orders, setup processes, scrap reasons or downtimes into the MES.

Advantages

- ✓ supports paperless production
- ✓ flexibly adaptable to the processes in your production
- ✓ one terminal can control several machines
- ✓ intuitive interface for manual data entry by the operator
- ✓ tablets with any operating system can be used as clients

Functions

- ✓ input of downtime and scrap reasons
- ✓ starting and stopping orders
- ✓ visualizing order and machine data in real-time
- ✓ employee log-in at several machines in parallel
- ✓ correcting the cavity of the mold

Customer benefit

With the Web Terminal you increase transparency on the shop floor and thus create the basis for analyses and improvement measures in the production process. Fully digitizing the shop floor brings you a crucial step closer to paperless production.
